

## MEDICAL IMAGING

**Computer-assisted detection software for digital mammography:** This software will complement the reading of mammography exam images for cancer screening and reduce the error rate.

## EMERGENCY

**Fetal monitor:** This device will detect whether labour has begun, record the baby's heart rate, and record uterine contractions. Thanks to this monitor, pregnant women will not have to go outside the region for their follow-up.

**Mattress and bed:** This new bed will improve patients' comfort and safety and optimize infection control because patients must currently remain in Emergency, on a narrow stretcher, until a bed is available.

**Television:** A television will be added to this area to entertain and inform patients while they are waiting.

## TELEHEALTH

**Mobile telehealth system (small screen):** Telehealth allows patients to consult a medical specialist or other health professional outside the region via video. This system will save patients time, money and effort. It will also be used for staff training purposes, etc.

## MEDICAL

**Bariatric mattress and bed:** This bed has various levels and modes to improve patients' safety and comfort. It will also improve the quality of hygiene care and medical care and help ensure that patients who have obesity problems are treated with dignity and respect.

## REGIONAL PROJECT

The Fondation Hôpital de l'Enfant-Jésus is proud to participate in the Chaleur Regional Hospital's Major Fundraising Campaign, which will make our regional hospital's modernization project possible. Keep in mind that this facility receives thousands of patients from all corners of the Acadian Peninsula every year.
